

2C and I2C Series

Two-Stage Centrifugal Pumps

Myers two-stage centrifugal pumps deliver high performance with a rugged design for years of trouble-free service. The 2-stage pumps are available as a complete pump and motor assembly, or pump end only. The fully assembled pump end quickly mounts to a NEMA 56C motor. The pumps will easily prime up to 15 feet of total suction lift. The dynamically balanced impellers produce steady, quiet and vibration-free performance at all pressures.

APPLICATIONS

- ◆ Booster service
- ◆ Irrigation
- ◆ Cold and hot water circulation
- ◆ Fluid transfer
- ◆ Boiler feed
- ◆ Car wash installations
- ◆ Water reclamation
- ◆ Water supply
- ◆ Golf course sprinkling
- ◆ General industrial and commercial applications
- ◆ Jobs requiring pumping clear or noncorrosive liquids.

SPECIFICATIONS

- ◆ **Volute Case:** High tensile gray iron casting with wear rings. Threaded discharge tapping rotates to 8 positions.
- ◆ **Seal Bracket:** High tensile gray iron casting with threaded suction tapping. Seal bracket has oil chamber to lubricate and cool the seal face.
- ◆ **Drain Plugs:** Plugs are conveniently located so case can be completely drained in any discharge position.
- ◆ **Bearing Bracket:** Heavy duty bracket provides rigid support for liquid end. Holds shaft bearings in perfect alignment with pump case for quiet operation.
- ◆ **Shaft Bearings:** Heavy duty ball bearings, sealed on outboard side, lubricated at the factory.
- ◆ **Impellers:** Dual enclosed impellers are hydraulically and dynamically balanced. Mounted back-to-back for reduced axial thrust, results in vibration free operation and minimum bearing load. I2C has bronze impellers and I2CI has epoxy coated, high tensile gray iron impellers.
- ◆ **Wear Rings:** Replaceable wear rings and interstage bushings help to eliminate wear of the casting in the impeller hub and ring area. Bronze in I2C, Ni-Resist in I2CI.
- ◆ **Mechanical Shaft Seal:** Located on suction side to provide lower pressure differential and longer seal life and maximum positive inlet pressure of 75 PSI. Standard seal will accommodate 220°F. Please consult factory for special seal applications.
- ◆ **Pump Shaft:** Manufactured from tough corrosion resistant 416 stainless steel.
- ◆ **Rubber Deflector:** Molded rubber deflector protects bearings from moisture and dirt.
- ◆ **Snap Ring:** Carbon steel ring holds bearing/shaft assembly in place, prevents axial movement of the bearings and shaft.
- ◆ **Motor (Frame Mounted Units):** General purpose, 3450 RPM open drip proof. 230/460 volt motor is standard. TEFC motors available on request. Frame mounted units use a flexible coupling for easy motor or pump replacement. Mounted on a heavy-duty welded steel base.
